

THE HIFLORA SERIES

HIFLORA/20

"STS" liquid (Silver Thiosulfate)

HIFLORA/20 compounded of STS restrains Ethylene-gas generation, which causes withering of carnations and/or lilies.

HIFLORA/20 can be diluted with water and used at any density for the purpose of use. And diluted liquid is stable for a long term.

This liquid is effective for a larkspur and a lily of the Incas, and a sweet pea as well as a carnation.

How to use

After a crop, please dilute HIFLORA/20 with water to 100-200 times. And let flowers absorb this liquid for 5-24 hours.

	Dilution	Processing time
CARNATION	100 times	6 hours
	200 times	17 hours
LARKSPUR	100 times	5 hours
	200 times	12 hours
LILY	100 times	6 hours
	200 times	17 hours
LILY OF THE INCAS	100 times	5 hours
	200 times	12 hours
