

# THE HIFLORA SERIES

# HIFLORA/CONC

*"STS"* liquid (Silver Thiosulfate)

HIFLORA/CONC compounded of STS restrains Ethylene-gas generation, which causes withering of carnations and/or lilies.

HIFLORA/CONC can be diluted with water and used at any density for the purpose of use. And diluted liquid is stable for a long term.

This liquid is effective for a larkspur and a lily of the Incas, and a sweet pea as well as a carnation.

## How to use

After a crop, please dilute HIFLORA/CONC with water to 500-1000 times. And let flowers absorb this liquid for 5-24 hours.

	Dilution	Processing time
CARNATION	500 times	6 hours
	1000 times	17 hours
LARKSPUR	500 times	5 hours
	1000 times	12 hours
LILY	500 times	6 hours
	1000 times	17 hours
LILY OF THE INCAS	500 times	5 hours
	1000 times	12 hours
