

THE HIFLORA SERIES

# HIFLORA/MUM

Chrysanthemum leaf etiolation inhibitor.

Two weeks later

This product is a preservative for chrysanthemums which we developed for cut flower producers.

HIFLORA/MUM prevent etiolation of leaves often occurred during long transportation and/or storage time, and by the nature of cultivation season.

## How to use

After a crop, please dilute HIFLORA/MUM with water to 100-200 times. And let chrysanthemums absorb this liquid for 10-24 hours.
